Dear Bob:

Re: The Troy Record Company
Troy, N. Y.

We will need about 200 feet of 3 1/8" coaxial transmission cable for the above installation including all necessary couplings, flanges, seals, elbows, dehydrating system, etc.

I cannot give you the definite installation plans for this cable until I design the transmitter station and know just where the tower will be located with respect to the building. I suggest you figure on a normal installation. If more elbows than normal are required, I could let you know later.

At the show early this week in New York I inspected some Andrew Company line and it looked very good to me. I talked with several practical operating engineers who were also inspecting the Andrew exhibit and heard some very favorable comment on their product. I know, of course, that you are currently offering Communication Products Co. line. Why not give me a proposition on both?

Because this line is going to be tough to locate it is suggested that you get the best possible delivery and let me know so that we can place an order promptly to be sure we have it when we make the installation.

Incidentally, please check the Troy Record contract and see if there is on order the necessary recording equipment, turntables, etc. I do not have a copy of the contract. Can you send me a copy for my information? The next time I am in Syracuse I will check the order thoroughly with you and your group.

Very sincerely,

Mr R J Brown
