Lehigh Structural Steel Company
Whitehall Building
New York City

Gentlemen:

Some months ago I believe that you quoted at my request on an antenna support for my client, The Troy Record Company, Troy, N.Y. Owing to engineering changes and a new transmitter site, the requirements have since changed. We desire quotation now on a suitable support of the guyed type with alternative on a self-supporting structure to take a GE 4-Bay Circular Type FM antenna. The over-all height of the combined support and 42 ft. GE antenna will be 100 ft.

Please quote direct to :

Mr. Frank L. York, Gen. Mgr.,
The Troy Record Company
Troy N. Y.

stating best delivery and also marking me for copy of your quotation.

Your quotation should include all necessary erection accessories such as guys, anchor bolts, 300 m/m/ flasher beacon, intermediate obstruction lights and suitable mounting fixtures to take the GE antenna deep enough into the structure to assure ample ruggedness and to meet a 20 lb. loading.

Cordially yours,

Ernest A. Barbeau
Radio Consultant
