

March 7, 1947

Dear Mr. Gantney:

I am writing for Mr. F. L. York,
General Manager of the Troy Record Company,
our mutual client.

It is necessary for me to have a
duplicate set of contour maps, profiles
and copies of your engineering report
filed with the Federal Communications
Commission. Mr. York received but
one duplicate copy whereas my other
clients generally receive duplicate
copies - as many as three.

If you do not have an extra copy
available, please have a set made up for
me and charge it to my client.

Incidentally, since talking with
you last week, we have another serious
problem to contend with; that of power
availability. We need 25 Kva three phase
power which is not available. Neither
is single phase available. This, together
with the lack of line of sight for an OT
link aggravates our situation frightfully.
I thought you might like to know these
problems which are associated with your
engineering calculations and your selection
of the proposed site. Do you have any
practical suggestions incident to their
solution?

Cordially yours,

George E Gantney
Associate Engineer
